JDC Skywatch Geos11 Handheld Weather Station
 Accessory Kit Information

Multi-Functional Support

Multi-functional support bracket for the Geos No.11 portable anemometer and weather station. When inserted into the back of the GEOS the support acts as a stand making the station much easier to use while at a desk or during data transfer to a computer. A central pre-drilled hole also means the GEOS can be attached to a standard tripod via the support bracket.

Skywatch Log Software with USB Interface

The Skywatch Log software comes complete with a USB cable to connect to your PC. Download information directly from your GEOS and view the data using Skywatch Log software. The Log Software enables you to view historical and real-time data from your GEOS, and make calibration adjustments to the instrument itself

GEOS Wind Vane

The Skywatch wind vane is the ideal accessory for those who require wind direction information. Just attach to the bottom of your GEOS No.11 and set on a tripod for accurate and instant data.

Tripod not included in Kit

Accessory Kit includes :

- USB interface Kit
- Software
- Metal support
